

# Arborist Services

## WE SEE THE FOREST THROUGH THE TREES.

Evaluating property involves more than location and price. In today's highly regulated environment, the type and amount of trees present on a parcel can affect its marketability and development potential. It is critical for buyers and sellers to understand the effects of existing vegetation on property potential.

Bowman's Arborist Services provide thorough evaluations during the feasibility and transaction phases, as well as full service analysis, assessment and management plans designed to advance development plans, achieve permitting requirements and avoid costly impacts.

Often working alongside the firm's landscape architects and engineers, our arborists also consult with public and private entities such as park districts, municipalities, federal agencies and private land owners looking to develop, manage and protect natural resources.
